`store_revenue = SUM(ss_net_paid)` m_1

Grain `(ss_ticket_number, ss_item_sk)` c_1 ✓

1 Learn

Agent A · March: one sale per ticket–item key

publication check c_1 ✓ publishes **v1**

2 Reuse

Agent B · September: same record, new period

c_1 holds on the new snapshot ✓ **SQL**

schema, value probes, joins: skipped

3 Change

A restatement keeps old rows in `store_sales`:

`(1001, 7)`	current
`(1001, 7)`	old
`(1002, 4)`	current

the grain key has two rows: c_1 ✗ **blocked**

4 Maintain

candidate filter `ss_is_current = 1`

unique repair ✓ keys preserved ✓ March answer ✓

all three hold → **v2** · otherwise revoke
